# PRODUCT COMPARISONS A

# A PRODUCT COMPARISONS - AVAST ANTIVIRUS FOR PC

	Feature	Description	Free Antivirus for PC	Premium Security for PC
	Smart Scan	It scans and advises you on the following - Browser threats - Viruses & malware - Outdated apps - Advanced issues		
	My Statistics	Personalized security report in the UI.		
	File Shield	Scans any file added to or opened on PC. It actively scans all programs and files on your hard drive as they are opened, run, modified, and saved. If malware is detected, File System Shield prevents the program or file from infecting your PC. Auto process tries to repair the file, if not possible then moved to quarantine, if not possible then deleted.		
	Cyber Capture	Automatically sends suspicious files for analysis to the cloud, and pushes a cure (e.g. virus definition updates) to all Avast users if it's a threat.		
	Sandbox	Allows to safely run suspicious apps, sandbox any app to avoid affecting the rest of your PC.	_	
<b>V</b> →	Behavior Shield	Evaluates every process on the user's PC in real-time and warns if any application behaves suspiciously (that may indicate the presence of malicious code).		
	Web Shield	Blocks web attacks and unsafe downloads.		
Ů	Anti-Phishing	Automatically blocks scams and fake websites. This is not a separate feature, but a part of web threats detection, based on domain name.		
	Botnet Protection	Prevents the PC from being hijacked and made part of a botnet.		
	Mail Shield	Blocks malicious email attachments. In case that such an attachment is detected, an alert will be displayed to the user, they still can choose to download the file if they trust it.		

Extra layer of protection to keep personal photos and files safe from unwanted changes.

It secures them from being modified, deleted, or encrypted by ransomware attacks.

It scans for and automatically secures folders which may contain personal data and

Additionally, you can specify which applications are allowed to modify the files in

your folders and which applications are always blocked.

allows you to specify which other folders you want to protect from untrusted applications.

Feature	Description	Free Antivirus for PC	Premium Security for PC
Sensitive Data Shield	Blocks spyware from accessing your sensitive documents.	_	
Remote Access Shield	Blocks hackers from remotely taking control over your PC.	_	
Webcam Shield	Guards against webcam spying by blocking applications and malware from accessing your PC's webcam without your consent.	_	•
Real Site	Protects against DNS hijacking to avoid fake sites for safer shopping and banking.	_	•
Wi-Fi Inspector	Exposes intruders, monitors devices and security weakness in your smart home network. It checks the status of your network, devices connected to the network, and router setting. Wi-Fi Inspector helps you secure your network to prevent attackers from accessing it and misusing your personal data.		
Advanced firewall	Prevents hackers from sneaking onto your PC to steal your data.	_	•
Data Shredder	Ensures that files are securely deleted to ensure that no one recovers them.	_	
Rescue Disk	Allows users to create a rescue disk image on a USB or CD to reboot. Rescue Disk allows you to examine a PC without launching Windows. In case when you suspect that your PC is infected with malware and were unable to resolve it with other scans (cases of persistent or difficult-to-clean security threats), you can do it while the PC is not running to increase chances of detecting it as malware won't counteract. A user has to create a Rescue Disk on a USB or CD.		

Password Protection Protects passwords stored in the browser.

Software Updater

Reduces security risks by automatically updating apps.

Do Not Disturb Mode Allows for distraction-free gaming, watching movies, or presenting by blocking pop-ups.

(just manual updater)

# PRODUCT COMPARISONS - AVAST ANTIVIRUS FOR MAC

	Feature	Description	Free Mobile Security for Mac	Premium Mobile Security for Mac
	File Shield	Instantly scans any file launched on a Mac to ensure it's free of any recognizable malware.		
	Web Shield	Scans websites for malware and other dangers to block threats before they are downloaded to a Mac.		
	Mail Shield	Scans emails received in an inbox to ensure they are free of malicious attachments, and even prevents users from sending malicious attachments to others.		
<b>\$</b>	Ransomware Shield	Additional layer of ransomware security. Ransomware Shield stops both ransomware and untrusted apps from changing, deleting, or encrypting personal photos and files in protected folders.	_	
	Secure DNS (Real Site)	Protects you against DNS hijacking, a type of malicious attack that redirects you from the real site you want to visit to a fake site that may look the same.	_	
	Smart Scan	An in-depth, full system scan of a user's Mac.		
	USB/DVD Scan	Scans any mounted removable volumes such as USB and DVD drives. This scan happens automatically if the user connects a new USB.		
	Targeted Scan	Scans specific folders or files. A scheduled custom scan is the perfect solution for when users are sleeping or away from their Mac. Users can choose exactly when a scan should run, the type of scan they'd like, when it should first launch, and how frequently it should scan.		

# PRODUCT COMPARISONS - AVAST ANTIVIRUS FOR ANDROID

	Feature	Description	Free Mobile Security for Android	Premium Mobile Security for Android	Ultimate Mobile Security for Android
##	Daily Scan (automatic scan)	Like the Smart Scan feature, Daily Scan scans for browser threats, malware, outdated apps and issues, and it does so daily.			
	Smart Scan	Enables on-demand scans of all applications installed on your device and informs you about security risks.			
	Web Shield	Scans all data that is transferred over the network in real-time to prevent malware.			
	File Scanner	Scans individual files and folders for security threats.			
70	Wi-Fi Scan	Scans the Wi-Fi network to which the device is connected and may identify specific vulnerabilities.			
	Wi-Fi Speed Check	Checks the download and upload speed of the Wi-Fi network to which you are connected.			
	App Lock	Protects your sensitive apps with a PIN, pattern or fingerprint.	<b>_</b>		
-	VPN (built-in)	Hides your online activities and changes your device and draining the battery.	_		
	Photo Vault	Protects access to your photos with a PIN code. Photos that are moved to the Photo Vault are encrypted and hidden.	10 Photos	Unlimited	Unlimited
A STATE OF THE PARTY OF THE PAR	Anti-Theft	Protects your private mobile data and help you recover your device in case of loss or theft.	Partially (remotely lock or wipe lost or stolen device)		
	Junk Cleaner	Analyzes the space on your device and displays the amount of storage space that is being used by junk files.			
	RAM Booster	Kills apps running in the background to prevent these apps from slowing down your device and draining the battery.			
1010	App Insights	App Usage - Provides information about how much time you spend using each app Data Usage - Provides information about data usage (such as an alert) of your installed apps Permissions - Provides information about which permissions are required by each of your installed apps.			
AD	Remove Ads	Removes all 3 <sup>rd</sup> party advertisement from the app.	_		
	Direct Support	Contact Avast directly from the app to receive quick responses to your inquiries.	<b>—</b>		

# PRODUCT COMPARISONS - AVAST ANTIVIRUS FOR IOS

Feature	Description	Free Mobile Security for iOS	Premium Mobile Security for iOS
Web Protection	Protects you from dangerous and malicious websites, and helps to avoid online scams (anti-phishing).		
Scan	Scans your iPhone/iPad for threats and vulnerabilities. Easy guidance to keep your security and privacy settings up-to-date.		
Wi-Fi Security	Detects and alerts you about unsecure Wi-Fi networks.		
Identity Protection	Notifies you if your passwords have been stolen and leaked online. Keep your online accounts from being compromised.	One email address	Unlimited
Secure Browsing VPN	Allows you to browse the web securely and privately whenever you need it. Protects you on public Wi-Fi hotspots with VPN, with automatic location selection only.	_	
Photo Vault	Locks your sensitive photos in an encrypted folder and secures them with a PIN, Touch ID, or Face ID, so that only you have access to them.	40 Photos	Unlimited

# WHAT'S NEW IN 2021 B

## WHAT'S NEW IN 2021

2020 has shifted the way we work, live our lives, and use our devices. It's more essential than ever that people's digital lives run smoothly. In response, we've focused even more on the security, privacy, and digital wellbeing of the world's digital citizens — wherever they connect.

Reacting to the evolving threat landscape, both on and offline, we have implemented new features, updated and enhanced existing solutions, and improved the performance and accessibility of our services on every platform to keep the digital threats at bay.

With over thirty years of experience building and providing advanced digital security solutions, Avast has continued its focus on securing and protecting the digital lives of over 435M users worldwide, no matter where or how they connect.

As more people than ever before are working from home, we have improved many features to enhance security and privacy. Avast now offers our Ransomware Shield and Hack Alerts for free. Avast Passwords and our Remote Access Shield have been incorporated in our Premium offering, and a range of technical improvements have also been made to these applications.

## **AVAST ANTIVIRUS**

### What is it?

Avast has been protecting people around the world for more than 30 years, giving us three decades of experience in detecting and protecting our users from ever-evolving malware.

When we first started, we saw only a few new viruses each month and even sent out virus definitions to our customers on floppy disks or CD-Roms.

Now, we detect threats in real time, and block around 1.5 billion attacks a month, protecting more than 400 million users worldwide. In the early years, signature-based threat detections were the basis for antivirus engines, and are still one of the tools used by the industry today. For many years now, the cybersecurity industry has been using automated systems to detect threats.

Avast uses machine learning and artificial intelligence to protect people from the massive amount of cyberattacks we see every day and every minute. Artificial intelligence offers us the opportunity to detect threats in real time, and anticipate emerging threats. We train our machines to learn from databases of known threats to identify attack patterns of completely unknown threats. Our massive user base gives us a competitive advantage, providing access to huge amounts of security data, which is key to the success of our artificial intelligence and machine learning technology.

# AVAST SECURITY FOR PC C

## AVAST FREE ANTIVIRUS FOR PC - PROTECTION

### **Core Shields**

Avast Antivirus' core shields include Web Shield, Mail Shield, File Shield, and Behavior Shield.

#### FILE AND MAIL SHIELD

Like the Web Shield, our File Shield and Mail Shield protect essential — and often vulnerable — parts of PCs. Mail Shield scans emails received in users' inboxes to ensure they are free of malware, while File Shield quickly scans files that are launched on a PC to ensure they are free of any recognizable malware.

From Main dashboard → Protection → Core Shields → File Shield

From Main dashboard → Protection → Core Shields. Tick the box next to Enable CyberCapture

#### **CYBERCAPTURE**

As a part of File Shield, CyberCapture is a cloud-based smart file scanner that provides zero-second protection by detecting unrecognized files. Rather than relying on the latest definition updates, CyberCapture isolates unknown files in a safe environment and automatically establishes a two-way communication channel with the Avast Threat Labs. In an ever-evolving threat landscape, this important feature allows for deep analysis through Avast's threat analysts, providing a first response line of defense against new, never before reported threats.

To analyze a file in CyberCapture, Avast uses many automated systems (including code emulation and machine learning) together with manual analyst work. A decision is made on the basis of a summary of all the obtained information and once a file has been analyzed, we tell the user whether the file is safe or dangerous. CyberCapture analyzes an average of 20,000 files daily.

#### **WEB SHIELD**

As more and more online services are moving to HTTPS by default, or even HTTPS-exclusive, hackers are increasingly targeting these sites. Web Shield scans HTTPS sites for malware and other dangers, and verifies website certificates rather than replacing them with our own. HTTPS scanning detects and decrypts TLS/ SSL-protected traffic. Additionally, this feature adds compatibility for SPDY+HTTPS/ HTTP 2.0 and QUIC traffic. In other words, we check HTTPS sites without disrupting users' browsing experience.

From Main dashboard → Protection → Core Shields

# AVAST ANTIVIRUS SOLUTIONS REVIEWER'S GUIDE 2021

## AVAST FREE ANTIVIRUS FOR PC - PROTECTION

#### **BEHAVIOR SHIELD**

Behavior Shield monitors all the programs that are currently running on a PC, and carefully observes their behavior. Behavior Shield does not 'watch' what the user is doing, only what the software itself is trying to accomplish. If it notices something that is uncharacteristic for that program type (for example, a PDF reader program trying to download something from the web), Behavior Shield is triggered, stops the action, and reports the behavior to the user — preventing malicious programming from becoming deeply entrenched in a PC. Any undiscovered threats will then be reported and added to our ever-expanding threat database. Users can add programs they trust and Behavior Shield will leave these unsupervised. Information on trusted programs is fed into Avast's extensive cloud base.

From Main dashboard → Protection → Behavior Shield

#### RANSOMWARE SHIELD

Ransomware Shield goes a step further than the Avast Core Shields by giving users an additional layer of ransomware security. Ransomware Shield stops both ransomware and untrusted apps from changing, deleting, or encrypting personal photos and files in protected folders.

From Main dashboard → Protection → Ransomware Shield

## Streaming updates

While we do much of our heavy lifting in the cloud, we continue to keep our antivirus current with regular definition updates. This is especially important when users find themselves offline. Avast sends more than 400 micro-updates per day approximately one every six minutes — and have expanded the types of signatures provided over streaming updates and manually created signatures, along with TrojanGen/EvoGen, URL blocks, and whitelist signatures. In short, we're delivering near real-time signature updates to protect against the newest emerging malware.

# C AVAST FREE ANTIVIRUS FOR PC - SMART HOME PROTECTION

## Wi-Fi Inspector

In the age of connected devices, Avast Wi-Fi Inspector provides protection for your smart home by identifying weak passwords, vulnerable routers, compromised internet connections, and enabled, but not protected IPv6. By listing all the devices on the network, users are notified by new devices joining the watched network so users can make sure that only trusted devices are connected. If an issue is found, we'll offer solutions for how to fix it to keep users safe on both public and private networks.

From Main dashboard → Protection → Wi-Fi Inspector

# C AVAST FREE ANTIVIRUS FOR PC - PROTECTION

## Software Updater

Software updates can be a real hassle as they interrupt work and disrupt system functions. Because they can be so annoying, many users postpone installing them, which leaves their devices vulnerable. Many PC users are not aware that cybercriminals take advantage of vulnerabilities in outdated, commonly used software. Avast Software Updater helps users update their software and apps by listing all the out-of-date programs and applications on the device, allowing users to update them with a single, convenient click.

From Main dashboard → Performance → Software Updater

# C AVAST FREE ANTIVIRUS

FOR PC - PRIVACY

## **Avast Secure Browser**

Designed by our Avast browser development team, Avast Secure Browser is packed with useful, state-of-the-art tools and services. Features include Adblock (to make browsing the web faster and safer), Bank Mode (for secure banking), and Anti-Tracking (to prevent data brokers from tracking and selling personal data). Avast Secure Browser's Security & Privacy Center gives users complete control over their online privacy and security.

## **Hack Alerts**

Checks for leaked passwords on demand and monitors all accounts linked to a user's email address for future breaches, immediately alerting them if those passwords ever leak online.

## C AVAST FREE ANTIVIRUS FOR PC - USABILITY

Smart Scan lets users scan many issues with just a click, and makes it easy to discover features that could further improve their PC. To speed up the scanning process, Smart Scan combines scans for viruses, software updates, new features, and performance issues into one concentrated scan. Once completed, it shows the itemized results and, if there are any issues, offers tools and suggestions to fix them. Smart Scan is lightweight, and has been improved so that it now requires the user to take fewer steps,

allows for parallel scanning, and can be scheduled by the user.

**Smart Scan** 

From Main dashboard → Protection → Virus Scans → Click Run Smart Scan

From Menu in upper right corner → Settings → General → Troubleshooting → Tick the box next to Enable Passive Mode

## **Passive Mode**

Passive Mode allows users to easily run the tools

they want alongside their Avast solution. Passive Mode triggers automatically when another antivirus program is installed with Avast already on the system. When activated, Passive Mode shuts down our active shielding components and Firewall, which allows Avast and an alternative antivirus to share the same system space without competing. Users can utilize our scans and other tools alongside another antivirus solution chosen for real-time protection.

## C AVAST FREE ANTIVIRUS FOR PC - USABILITY

## Do Not Disturb Mode

Avast's Do Not Disturb Mode silences notifications while users are running an app in fullscreen. Windows notifications, popups from other apps, and even our own Avast antivirus notifications are all blocked to keep distractions at bay. This feature works with nearly any app running in fullscreen.

From Main dashboard → Performance → Do Not Disturb Mode

From Main dashboard → Protection → Virus Scan → Rescue Disk

## Rescue Disk

People can lose days of time and chunks of saved data while trying to purge malware from their systems. To smooth out this process, Avast allows users to create a version of their Avast installation and save it to a USB or CD. This way, if a user's PC becomes so infected that it can't even run Avast properly, the user has the disk version ready to give their PC a clean reboot and restore its functionality. The Rescue Disk is built on Windows PE (a pre-installation environment), which allows users to boot a PC even when there's no functioning OS. The Rescue Disk function is available with all Avast products.

# C AVAST PREMIUM SECURITY FOR PC - PROTECTION

In addition to all the Avast Free Antivirus features, Avast Premium Security also includes:

## Real Site

One of the biggest risks that online users face is DNS hijacking. Malware exploits vulnerabilities in a user's router and surreptitiously redirects them away from their intended destination, such as their bank's website, to a fake site that looks just like the real thing. When the user tries to log in, thieves capture the user's login details and then use them to access the real site. Real Site encrypts the traffic between an Avast-protected device and our DNS server, to ensure users access the right sites.

From Main dashboard → Protection → Real Site

From Main dashboard - Protection - Firewall

## Firewall

While Windows offers a free firewall, it is not nearly robust enough for most security needs and offers very few configuration options. Avast Firewall offers better outbound protection and configurability than Windows, while remaining invisible to the user. When set to 'Public Network' mode, Avast Firewall protects the user's privacy by blocking all incoming connections from the network, preventing sensitive data leaks and traffic-stealing attacks.

# C AVAST PREMIUM SECURITY FOR PC - PROTECTION

In addition to all the Avast Free Antivirus features, Avast Premium Security also includes:

## Sandbox

Sandbox is a virtual space that allows users to run files safely, separated from the rest of their PC. Sandbox can run individual files with just a click, and can continue to run them for as long as the user sees fit. Any changes made by the executable, or within the executable, are not saved once Sandbox is closed.

From Main dashboard - Protection - Remote Access Shield

## Remote Access Shield

Remote Access Shield allows you to control which IP addresses are allowed to connect remotely to your PC, and blocks all unauthorized connection attempts. This is specifically important, as in recent years, Avast has monitored a rise in attacks specifically designed to exploit Remote Desktop Protocol (RDP) in order to execute widespread ransomware attacks. With millions of workers around the world using RDP daily to remotely access their business network, this tool has become a strong cyber-attack vector, and Remote Access Shield is there to prevent such attacks.

## C AVAST PREMIUM SECURITY FOR PC - PRIVACY

Data Shredder encrypts deleted data so even if it's recovered, no one can extract anything from the files. When users delete a file, the space is made available again, but it's still possible to restore the deleted file. To avoid this, the free space needs to be rewritten with new data. That is what Data Shredder does — it writes in random data in that space. To be absolutely sure data cannot be restored, multiple bit patterns are used to overwrite the original data.

**Data Shredder** 

**Sensitive Data Shield** 

From Main dashboard → Privacy → Sensitive Data Shield

Sensitive Data Shield provides an extra layer of spyware protection, beyond what the free antivirus offers. Using advanced algorithms, it scans computers for documents containing names, addresses, phone numbers, and other data it thinks users would want to keep private. If it finds any, it will offer to seal them off from unknown apps and spyware. There's no need for users to move files or hide them in a secret folder, either. Sensitive Data Shield keeps everything right where users left them, and protects it all automatically. With Sensitive Data Shield, only trusted apps (e.g., Adobe Reader, Microsoft Word, etc.) can access or copy private documents. Anything else is automatically blocked — unless approved by the user.

# C AVAST PREMIUM SECURITY FOR PC - PRIVACY

## Webcam Shield

Webcam Shield blocks untrusted apps from hijacking the webcam to spy on users and their family. When selected in settings, Webcam Shield can ensure that all apps, regardless of whether they are malicious or not, ask for permission before accessing the webcam.

From Main dashboard → Privacy → Webcam Shield

Tick off the OFF slider so that it changes to ON

# Automatic Software Updater

For Avast Premium users, updates can be downloaded and installed automatically and unobtrusively, through our own system servers, so as to not disturb system functions.

# AVAST SECURITY FOR MAC D

# D AVAST SECURITY FOR MAC (FREE) - PROTECTION

## **Core Shields**

Our three shields, Web, Email, and File, work together in real time to prevent malware from infecting Macs. All shields are enabled by default and users can adjust or disable any shield from the program's preferences. Avast Security uses kernel or system extensions, depending on the MacOS version, to protect and secure a user's Mac, and to enable it, a user has to allow them in MacOS system preferences (MacOS requires user approval before loading newly-installed third party extensions).

From Main dashboard → Core Shields

#### **WEB SHIELD**

Web Shield scans websites for malware and other dangers to block threats before they are downloaded to a Mac.

#### MAIL SHIELD

Email Shield scans emails received in an inbox to ensure they are free of malicious attachments, and even prevents users from sending malicious attachments to others.

#### **FILE SHIELD**

File Shield instantly scans any file launched on a Mac to ensure it's free of any recognizable malware.

# AVAST SECURITY FOR MAC (FREE) - PROTECTION

### Scans

From Main dashboard → Click the search icon next to "Run Smart Scan"

#### **DEEP SCAN**

Performs an in-depth, full system scan of a user's Mac.

#### TARGETED SCAN

Scans specific folders or files. A scheduled custom scan is the solution for when users are sleeping or away from their Mac. Both Avast Security and Avast Premium Security users can choose exactly when a scan should run by opening the 'Custom scan' category from the left hand navigation and then clicking on 'Open now'. Users can also choose the type of scan they'd like, when it should first launch, and how frequently it should scan.

#### **USB/DVD SCAN**

Scans any mounted removable volumes such as USB and DVD drives. This scan happens automatically if the user connects a new USB.

From Main dashboard → Click the search icon → Click "Open Now" on "Custom Scans" icon

# D AVAST SECURITY FOR MAC (FREE) SMART HOME PROTECTION

## WI-FI Inspector

In the age of connected devices, Avast Wi-Fi Inspector provides protection for your smart home by identifying weak passwords, vulnerable routers, compromised internet connections, and enabled, but not protected IPv6. By listing all the devices on the network, users are notified by new devices joining the watched network so users can make sure that only trusted devices are connected. If an issue is found, we'll offer solutions for how to fix it to keep users safe on both public and private networks.

From Main dashboard → Wi-Fi Inspector

# D AVAST PREMIUM SECURITY FOR MAC - PROTECTION

In addition to all the Avast Free Security for Mac features, Avast Premium Security for Mac also includes:

## Ransomware Shield

Avast Security for Mac already stops ransomware thanks to its included shield technologies (Email, File, Web), but Avast Premium Security for Mac goes a step further by providing an additional layer of ransomware security. Ransomware Shield stops both ransomware and untrusted apps from changing, deleting, or encrypting personal photos and files in protected folders. By default, Ransomware Shield protects the areas of a Mac most vulnerable to ransomware: documents and picture folders. But users are free to secure other folders too (system folders, network folders, and external drives are not currently supported).

Whenever an untrusted app or piece of ransomware tries to change a file in a protected folder, Ransomware Shield will immediately block it and warn the user. From there, users can choose to allow the app or continue blocking it. Ransomware Shield intelligently recognizes trusted (whitelisted) apps like Microsoft Word and Adobe Photoshop to prevent warnings from interrupting workflow. Users who prefer total control can easily set Ransomware Shield to alert them to any and all attempts to modify a file — even those from trusted apps.

# AVAST SECURITY FOR ANDROID E

# E AVAST MOBILE SECURITY FOR ANDROID (FREE) - PROTECTION

## **Antivirus**

Avast Mobile Security checks thousands of applications from around the world, using both static and dynamic analysis to detect and protect Avast Mobile Security users from malicious applications. The static analysis checks the source code of programs for malicious features, while the dynamic analysis runs malware in a sandbox to observe its behavior to determine if a program is innocent or malicious. Avast Mobile Security automatically scans files, including applications, for viruses and other kinds of malware.

## **Wi-Fi Security**

Wi-Fi Security auto scans
Wi-Fi networks for vulnerabilities
to verify that the network users are
connected to is safe. Users receive
alerts if any risk is detected.

### Web Shield

Avast Mobile Security's Web Shield scans and blocks malware infected links, and fixes mistyped URLs. Anti-Theft

The free Anti-Theft features allow users to remotely lock or wipe their lost or stolen device via their My Avast Account. Users can also remotely sound an alarm on their device at maximum volume.

"Scan Wi-Fi" tile available on the main app screen or in Menu → Wi-Fi Security

From Main Menu → Anti-Theft

# E AVAST MOBILE SECURITY

# FOR ANDROID (FREE) - PRIVACY

## **Photo Vault**

The Photo Vault feature allows free users to secure up to 10 of their photos with a PIN code, pattern, or fingerprint password. After moving photos to the vault, they are fully encrypted and only accessible to the user.

From Menu → Photo Vault. To add a photo to Photo Vault, tap the plus icon in the bottom-right corner of the screen

# AVAST MOBILE SECURITY FOR ANDROID (FREE) - USABILITY

## Clean Junk

Clean Junk instantly cleans out unnecessary data, junk files, system caches, gallery thumbnails, installation files, and residual files to give users more space on their device.

Using App Insights, users can discover how much time they spend using each app on their device and take back control of their phone-life balance. Additionally, the feature gives users insights into the data which the apps they use consume, and provides details on app permissions granted to each app.

### **RAM Booster**

The RAM Booster feature kills tasks and processes that can slow down a phone or tablet.

From Menu → App Insights

# AVAST PREMIUM MOBILE SECURITY FOR ANDROID - PROTECTION & PRIVACY

In addition to the protection and features included in the free version of Avast Mobile Security, Avast Premium Mobile Security also includes the following features and functions, ad free:

## **Anti-Theft**

Avast Premium Mobile Security users can secretly capture photos and audio of a thief should their phone get stolen. Users can check their device's last location before its battery died, and mark their device as lost after eight failed unlock attempts.

## Photo Vault

After moving photos to the vault, they are fully encrypted and only accessible to the user. From Menu → Photo Vault.

From Menu → Anti-Theft

# App Lock

App Lock allows users to keep sensitive content secure and private by locking any app with a PIN code, pattern, or fingerprint password.

## **VPN**

The VPN, included in the Ultimate version of Avast Mobile Security, allows users to establish a VPN connection, to set up a secure connection. Users can choose their desired location to connect to.

# AVAST SECURITY FOR IOS

# AVAST MOBILE SECURITY FOR iOS (FREE) - PROTECTION

Wi-Fi Protection automatically scans Wi-Fi networks for vulnerabilities, to verify that the network users are connected to is safe. Users receive alerts if any risk is detected.

**Wi-Fi Protection** 

"Wi-Fi Protection" tile available on the main app screen

"Identity Protection" tile available on the main app screen

# **Identity Protection**

With the free version, users can register one email address to immediately receive a notification if any of their passwords are found leaked online — helping to keep their identity safe.

# **AVAST MOBILE SECURITY**

# FOR iOS (FREE) - PRIVACY

## **Photo Vault**

The version of Photo
Vault included in the free version
lets users lock up to 40 of their
photos in an encrypted vault and
secure them with a PIN, Touch ID,
or Face ID so that only they have
access to them.

"Photo Vault" tile available on the main app screen

# F AVAST PREMIUM MOBILE SECURITY

FOR iOS (FREE) - PROTECTION

## **Identity Protection**

Avast Premium Mobile Security users can register an unlimited number of email addresses to receive a notification if any of their passwords are found leaked online.

"Identity Protection" tile available on the main app screen

# F AVAST PREMIUM MOBILE SECURITY FOR iOS (FREE) - PRIVACY

The Photo Vault feature lets users lock an unlimited number of their photos in an encrypted vault and secure them with a PIN, Touch ID, or Face ID so

that only they have access to them.

Photo Vault

By using the Virtual Private Network (VPN) feature, and connecting to the closest VPN server, users can protect their privacy by making sure no one can spy on what they are doing online — even on risky public Wi-Fi networks.
