Patch Management

Identify critical vulnerabilities and quickly deploy updates to all endpoints

Patch management plays a critical role in endpoint security, but many businesses are reluctant to patch because there are too many patches, patching often interrupts operations, and they can cause problems with other systems. Avast Business Patch Management takes the guesswork out of patching by identifying critical vulnerabilities and making it easy to deploy patches across all endpoints from one central dashboard.

Patch automation to save time and money

Distribute thoroughly tested patches to thousands of devices in minutes with minimal impact on your network.

Third-party application patching

Patching support for Microsoft Windows and hundreds of popular vendors like iTunes®, Oracle®, Java, Adobe® Flash®, Reader, and more.

Remote patching

Patch all Windows devices anywhere – whether they're behind the firewall, on the road, at remote sites, or even asleep.

Centralize management

Manage software updates from a single console.

Mitigate and close vulnerabilities

Achieve compliance, mitigate exploits, close vulnerabilities, and remotely deploy software and Windows updates.

Features

Flexible deployment schedules

Schedule and deploy approved patches at desired times or manually deploy to groups or individual devices.

Intuitive dashboard

Manage all software patches and view graphical summaries of installed, missing, or failed patches from any device.

Customizable patches

Choose which patches to scan for and install based on the software vendor, product, or patch severity. Easily create exclusions for applications.

Master agent capabilities

Download all missing patches to a master agent that seamlessly distributes patches to all managed devices in the network.

Patch scan results

View detailed results from a single platform that includes information on missing patches, severity levels, knowledge base links, release dates, descriptions, and more. software with a variety of easily configurable reports.

Comprehensive reporting

Easily determine the health and security of device software with a variety of easily configurable reports.

Automatic scans

Schedule patch scans to run automatically every 24 hours and set patches to deploy automatically every Thursday. These default settings can be customized at any time.

Thousands of patches

Deploy patches for Windows operating systems and thousands of other third-party software applications for comprehensive protection.

Roll back patches

Simply uninstall patches if they are unstable from individual devices or you experience an issue so that your users can continue working without downtime.

Approve patches

A safeguard mechanism, so you know exactly what patches have been approved for deployment and which ones have not been approved.

About Avast Business

Avast delivers all-in-one cybersecurity solutions for today's modern workplace, providing total peace of mind. Avast provides integrated, 100% cloud-based endpoint and network security solutions for businesses and IT service providers. Backed by the largest, most globally dispersed threat detection network, the Avast Business security portfolio makes it easy and affordable to secure, manage, and monitor complex networks. Our easy-to-deploy cloud security solutions are built to offer maximum protection businesses can count on.
